

OVERSEEDING

The **Landpride Overseeder** is proven to be the most versatile seeder when it comes to renovating turf grasses. It is perfect for applications on golf courses, playing fields and large open spaces.

Precise placement of seed to soil contact is a unique feature of the **Landpride Overseeder**. The seed cups accurately meter seed sizes from Bentgrass to Fescue.

Successful seeding is achieved in three (3) ways -

1. Banana shaped blades prepare the soil by cutting through the thatch and turf to prepare the bed with minimum disturbance.
2. Seed is then dispatched at a selected and adjustable rate from 5kg per hectare to 396kg per hectare, into the prepared area.
3. The notched roller then pushes the seed into the prepared area, ensuring contact with the soil.

Other unique features of the **Landpride Overseeder** include –

- The ability to plant two (2) seed varieties within the one application
- Measured and adjustable seeding rates.
- Convenient clean out handle, to empty seed from hopper
- Wind protection of seed by low seed drop and wind guard
- Seed box agitator and flow through baffles, ensuring even flow
- Waterproof lid protects the seed from moisture
