

## INFORMATION SHEET FIELD TOP MAKER

---

### Site Soil Recycling and Ground Preparation

The Field Top Maker is a very shallow operating cultivator with its operating depth able to be adjusted continuously variable from +50mm to -50mm. The uses are varied and suited to any turf surface culminating in a smooth and level finish. A scarifying head can be installed to vertically cut turf to reduce the amount of thatch present in the turf sward. Some uses are:

- Surface levelling
- Thatch removal
- Stripping complete top layer to 50mm
- Shaves thatch to desired depth
- Harvesting sprigs/stolons for re-planting
- Racetrack transition renovation
- Golf course green stripping for renovation
- Renovation and levelling
- Field renovations
- Baseball infield lip-repair/levelling
- Smooths elevations in goal areas

This FTM offers true reduction of thatch compared with scarifying. Its capability of eradicating weeds such as winter grass and Parramatta grass mechanically, not chemically, are a reality.

The major advantage of this system is that the soil hydrology, soil life and stability are not being disturbed. The FTM is available for hire as a single operation or can be a strip and remove package.
